Economics

Unconstrained  
Approach

### PRODUCT OBJECTIVE

The Global X ROBO Global Robotics & Automation ETF (ROBO) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the ROBO Global Robotics and Automation Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by the index provider when publishing index constituents and is not comprehensive.\*

### ROBO GLOBAL ROBOTICS AND AUTOMATION INDEX

#### SELECTION

Constituents must be classified within the ROBO Global Industry Classification.

- They should be publicly traded on eligible exchanges.
- Companies must adhere to the ROBO Global ESG Policy.
- Market capitalization should be at least \$200 million USD for non-index components and \$100 million USD for current index components.
- Liquidity, measured by trading volume, must meet certain thresholds.
  - Companies with a trailing 3-month composite average daily value traded that is more than \$2 million USD or companies which are currently an Index Component, with a trailing 3-month average daily value traded at the relevant Determination Date that is more than \$1 million
- Companies listed on certain Chinese exchanges must meet specific criteria.
  - Companies listed on either the Shanghai/Hong Kong Stock Connect or Shenzhen/Hong Kong Stock Connect exchanges must appear on the “Lists of securities eligible for unrestricted buying and selling” published by the Hong Kong Stock Exchange concerning the eligibility of securities under the China Stock Connect Program.
- Stocks must have a Theme Score of 50 or higher, determined by factors like revenue from theme-related activities and market/technology leadership.
- The index should have a minimum of 50 constituents, adjusting criteria if necessary.
- A maximum of 100 constituents is allowed, selected based on Theme Score and market capitalisation.

#### Sub-Index Selection

- Includes all constituents of the primary index which are listed on an eligible United States of America exchange.
- Includes all constituents of the primary index which are listed on an eligible Japanese exchange.

#### SELECTION POOL

- Companies within the ROBO Global® Robotics and Automation Index Series are identified as “Technology” companies or “Applications” companies:
  - “Technology” refers to all companies that manufacture or provide services related to machinery, equipment, devices, or sensors that support a robot performing a task.
  - “Applications” refers to companies that incorporate multiple robotic and automation technologies into their product or manufacturing process to improve efficiency in traditional business lines, as well those that are developing entirely new business propositions within the theme.
- Companies are further subclassified into the following subsectors under either Technology or Applications:
  - “Technology” – Actuation, Computing & Artificial Intelligence, Integration, and sensing
  - “Application” – 3D Printing, Autonomous Systems, Business Process Automation, Food and Agriculture, Healthcare, Logistics Automation and Manufacturing & Industrial Automation

- Theme Score:
- Companies classified within each subsector are assigned a “Theme Score,” comprised of factors representing:
  - An assessment of the revenue a company generates, contributes to, and derives from business activities related to the assigned subsector(s).
  - This includes an evaluation of the company’s investment in existing or new business areas.
  - This criterion involves an assessment of a company’s market share, addressable markets, business partnerships, competitive advantages (moats), executive leadership team, financial stability, and risk factors, relative to its peers in the respective subsector(s).
  - This includes an evaluation of each company’s technological capabilities in key areas related to the specific theme and subsector(s), covering technical moats, patents, development pace, positioning (first mover, etc.) and innovation factor.
- Each stock’s “Theme Score” ranges from 1 to 100 and is reviewed no less than annually.

## WEIGHTING SCHEME

---

- Constituents’ weights are based on their Theme Scores.
  - Each constituent’s weight is calculated by dividing its “Theme Score” by the sum of all constituents
- Chinese exchange-listed securities have their weight adjusted by a China A Inclusion Factor, with excess weight redistributed.
- Individual security weights are capped to approximately 5% of available shares, adjusted based on total assets under management in associated ETFs.
- Sub-index constituents are weighted based on their reference weights to ensure a sum of 100%.

## REBALANCE/REVIEWS
